Ramirez, Delia Tuesday, November 20, 2001 9:48 AM STIC-Biotech/ChemLib 09/854,844 search MEg

Hi,

I would like to request the following searches (09/854,844 Hu et al.):

- 1. a standard search of seq id 1 in the nucleic acid databases (commercial and interference)
- 2. a standard search of seq id 2 in the protein databases (commercial and interference)
- 3. an oligo search of seq id 1 in the nucleic acid databases (commercial and interference)

Thank you,

Delia M. Ramirez, Ph.D.

New serine protease(s) and kinase involved in regulating cell

```
The present sequence represents the amino acid sequence of murine HELA2. Human HELA2 was isolated from HeLa cells. HELA2 has high homology to serine proteases. The protein is involved in or associated with requiation of cell activity and/or viability. Administration of recombinant HELA2 (also called testisin) is used to increase fertility. Downrequiation of HELA2 reduces fertility. HELA2 is also a suppressor of testicular germ cell cancers (seminoma) and is also expressor of testicular germ cell cancers (seminoma) and is also expressor of testicular cancers (of colon, pancreas, prostate and ovary), so is a marker/potential therapeutic target for cancer. The promoter from the HELA2 gene is useful for testis-specific expression of other genes, e.g. for gene therapy or modulation of fertility. Drugs that block activity of HELA2 should have antitumour activity (other than in testis recombinant HELA2 should stop growth of tumours and normalise sperm development (eliminating the need for orchidectomy).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   79 YTVWLGSITVGDSRKRV-----KYYVSKIVIHPKYQDT-TADVALLKLSSQVTFTSAILP 132

The present sequence represents the amino acid sequence of the long isoform of HELA2. CDNA generated from HeLa cells and PAI-2 expressing telefacells was amplified using PCR primers AAV4812-13. Three new sequences were detected in the 480 bp amplicon. These sequences are designated HELA2 and ATC2 which have high homology to serine proteases and BCOM3 which has homology to a kinase. The proteins are involved in or associated with regulation of cell activity and/or viability.

CC and BCOM3 which has homology to a kinase. The proteins are involved in or associated with regulation of Cell activity and/or viability. HELA2 increase fertility. Downregulation of HELA2 (also called testisin) is used to increase fertility. Downregulation of HELA2 reduces fertility. HELA2 is also expressed in some non-testicular germ cell cancers (seminoma) and is also can ovary), so is a marker/potential therapeutic target for cancer. The prometer from the HELA2 gene is useful for testis-specific expression of the produce activity of HELA2 should have antitumour activity (other than the block activity of HELA2 should have antitumour activity (other than the testis phale in testis recombinant HELA2 should stop growth of tumours and normalise sperm development (eliminating the need to orchidectomy). Identification of mutant forms of HELA2 can be used to diagnose infertility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         217 KGDSGGPLSCHIDGVWIQTGVVSWGLECGK-SLPGVYTNVIYYQKWINATISRANNLDFS 275

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents the amino acid sequence of the short isoform of HELA2. CDNA generated from HeLa cells and PAI-2 expressing HeLa cells was amplified using PCR primers Aav48312-13. Three new sequences were detected in the 480 bp amplicon. These sequences are designated HELA2 and ATC2 which have high homology to serine proteases and acoust which has homology to a kinase. The proteins are involved in or associated with regulation of cell activity and/or viability.

Administration of recombinant HELA2 (also called testisin) is used to increase fertility. Dewnregulation of HELA2 reduces fertility. HELA2 is also a suppressor of testicular germ cell cancers (seminoma) and is also expressed in some non-testicular cancers (of colon, pancreas, prostate of and ovary), so is a marker/potential therapeutic target for cancer. The promoter from the HELA2 gene is useful for testis-specific expression of other genes, e.g. for gene therapy or modulation of fertility. Drugs that block activity of HELA2 should have antitumour activity (other than testis) while in testis recombinant HELA2 should stop growth of tumours and normalise sperim development (eliminating the need for orchitals).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       : : | ||:| | |||||| : | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | :

                                                                                                                                                                                                                                                                                                                                 The present sequence represents novel human protease HUPM-3, as deduced from the consensus sequence (see AAX87151) of overlapping cDNA clones obtained from various libraries. Northern analysis shows expression of HUPM-3 in cardiovascular, haematopoietic and male reproductive cDNA libraries. Approximately 86% of these libraries are associated with neoplastic disorders. The invention provides 12 new human proteases, 1.e. HUPM-1 to -12 (see AAX6432-43), and the polynucleotides encoding them (see AAX87149-60). Also provided are vectors, host cells and methods for producing HUPM polypeptides, as well as agonists and antagonists of HUPM. Methods for treating or preventing cell proliferative disorders and immune disorders using HUPM or HUPM antagonists are claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          98 YVSKIVIHPKY-QDTTADVALLKLSSQVTFTSAILPICLPSVTKQLAIPPFCWVTGWGKV 156

tetal lung, fetal kidney, fetal brain, fetal liver and fetal retina.

The encoded polypeptides have specific uses based on their homology to known polypeptides, e.g. PRO211 and PRO217 can be used for disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal lesions

(e.g. entercoolitis, Zollinger-Ellison syndrome, gastrointestinal ulceration and congenital microvillus atrophy), skin diseases associated with abnormal keratinocyte differentiation (e.g. psoriasis, epithelial cancers such as lung squamous cell carcinoma of the vulva and gliomas), potent effects on cell growth and development, diseases related to growth or survival of nerve cells including Parkinson's disease, Alzheimer's disease, ALS, neuropathies or cancer. PRO265 can be used as a target for anti-tumor drugs. PRO369 can be used as an a target for anti-tumor drugs. PRO369 can be used as an continonment; PRO287 polypeptides and portions may have therapeutic applications in wound healing and tissue repair; PRO317 can be used for treating problems of the kidney, uterus, endometrium, blood vessels, or related tissue, e.g. in the heart of genital tract.
                                                                                                                                                                                                                                                                                                                                                    6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; eosinophil; serine protease; allergic disease; infectious disease; tumour; granulomatous disease; collagen disease; vascular inflammation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a human eosinophil serine protease. The protease is useful in drug compositions for the prevention and treatment of allergic diseases, infectious diseases, tumour diseases granulomatous diseases, collagen diseases and vascular inflammation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Secretory proteins play important roles in the proliferation control, the differentiation induction, the material transport and the biophylaxis of cells. Wembrane proteins have important roles as signal receptors, ion channels and transporters the present sequence is a human protein. Hen present sequence is a human protein which has at least one hydrophobic domain. This protein may be a secretory or a membrane protein. The present protein may have cytokine and cell proliferation/differentiation activity, immune stimulating or suppressing activity, haematopolesis activity, tissue growth activity, amongitic activity, chemotactic/chemokinetic activity, nemostatic and thromoblytic activity, anti-inflammatory activity and tunour inhibition activity. The present protein could therefore be used for treatment of autoimmune disease, Alzheimer's disease, Parkinson's
                                                                                                                                                                                                                                                                                                                                                                 Proteins comprising hydrophobic regions, such as secretory and membrane proteins, useful in research and diagnostics and having various activities e.g. immunomodulatory, antiinflammatory, chemokinetic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           : : | ||:| | |||||| : |: | : | |: | : | |: | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | :

The PRO polypeptides are useful for treating skin diseases (e.g. psoriasis), cancers (e.g. lung aguamous cell carcinomal, gastrointestinal disorders (e.g. enterocolitis), neurodegenerative diseases (e.g. Alzheimer's disease, parkinson's disease), wound repair, cardiovascular disorders (e.g. endometrial bleeding angiogenesis, ischaemias such as coronary ischaemia, atherosclerosis), inflammatory disorders (e.g. asthma, rheumatori archititis, multiple sclerosis), infertility, AIDS and diabetes and retinal disorders such as retinitis pigmentosum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sixty one nucleic acids encoding PRO polypeptides which are useful in the treatment of skin diseases (e.g. psoriasis), cancers (e.g. lung squamous cell carcinoma) and neurodegenerative diseases (e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

This protein sequence is encoded by human cancer-specific gene (CSG), Pro104. Pro104 is a serine protease that shares 31 percent homology with human hepsin at the amino acid level. When aligned with other serine proteases, Pro104 shares all the conserved amino acid motifs that are characteristic of all other serine proteases, in particular a highly

```
6
conserved RIVGG sequence (see AAY91872). The inventive methods comprise measuring expression of CSG in order to diagnose, stage, image and treat gynecologic and testicular cancers. The levels of CSG are compared to levels found in a normal human control (a change in the measured level of CSG is associated with the presence of the cancer). The early diagnosis of cancers improves the success rate of therapeutic protocols.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  HTRM; human transcriptional regulatory molecule; arteriosclerosis; AIDS; arteriosolerosis; carrhosis; cancer; leukaemia; diabetes mellitus; Addison's disease; multiple sclerosis; rheumatoid arthritis; infection; trauma; myasthenia gravis; adenocarcinoma; immune disorder; treament.

The present sequence is human protease T protein. The protein is useful for treating a condition mediated by protease T. It is useful for treating an imbalance of desquamation, by topical application of a pharmaceutical composition containing the protease. The composition is useful as a topical skin care composition. It is useful as a laundry detergent, shampoo, hard surface cleaning composition, and dish care cleaning composition. Protease T protein is useful for treating and preventing skin flaking. It is less immunogenic to sensitive individuals and it provides efficient proteolytic activity in a non-natural
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |::|: :|||||| : | | | | || || :| 64 || iaeqwvltaahcfrntsetslyqvllgarqlvqppphamyarvrqvesnplyqgtassa 123

The specification describes an expression vector system that will permit, through limited proteolysis, the activation of expressed zymogen precursors of serine proteases (e.g. prostaain) in a highly controlled and reproducible fashion. The expression vector comprises, in frame and in order, a pre-sequence, a pro-sequence and a cloning site for in frame in order, a pre-sequence, a pro-sequence and a cloning site for in frame in order, a catalytic domain cassette. The expression vectors of the invention are useful for the expression of heterologous inactive zymogen proteases that can subsequently be proteolytically processed to generate the active enzyme produce can be useful for diseases associated with inflammatory, reproductive, epidermal or neurological tissue or for identifying modulators of protease activity which can be used for treatment. The proteases can also be used in commercial products, e.g. laundry detergents, stain removing solutions and skin care products. The present sequence is encoded by the catalytic domain in an expression vector of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               An expression vector for the expression of inactive zymogen proteases useful for therapeutic or commercial products comprises a pre-sequence, a pro-sequence and a cloning site for in frame insertion of a catalytic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            8;
                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes an expression vector (I) comprising in frame and in order, a presequence, a prosequence, and a cloning site for the in frame insertion of catalytic domain cassette. (I) can be used as a modulator of proteins expressed from a zymogen activation construct. The recombinant catalytic domain of serine protease is useful for identifying compounds modulating the activity of proteases is expressed and activated from the zymogen activation construct. A method from the present invention comprises combining a modulator of the recombinant catalytic domain of a protease and measuring an effect of the modulator on the protein preferably inhibiting or enhancing its enzymatic activity or stimulation or inhibition of proteolysis mediated by the expressed catalytic domain. The present sequence represents a fusion gene with a human serine protease catalytic domain protein
                                                                                                                                                                                                                                                                                                                                           Expression vector for producing recombinantly producing serine protease domains, comprising a presequence, a prosequence, and a cloning site for the insertion of catalytic domain cassette -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     47 FDHNFIYGGSLVSERLILTAAHCIQPTWTTFSYTVWLGSITVGDSRKRVKYYVSK-IVIH 105

on chromosome 16p13.3. HELLA was isolated from HeLa cells, and has homology to serine proteases. The protein is involved in or associated with regulation of cell activity and/or viability. Administration of recombinant HELA2 (also called testisin) is used to increase fertility. Downregulation of HELA2 reduces fertility. HELA2 is also a suppressor of testicular germ cell cancers (seminoma) and is also expressed in some non-testicular cancers (seminoma) and is also expressed in some non-testicular cancers (of colon, pancreas, prostate and ovary), so is a marker/potential therapeutic target for cancer. The promoter from the HELA2 gene is useful for testis-specific expression of other genes, e.g. for gene therapy or modulation of fertility. Drugs that block activity of HELA2 should have antitumour activity (other than in testis recombinant HELA2 should stop growth of tumours and normalise sperm development (eliminating the need for orchidectomy). Identification of mutant forms of HELA2 can be used to diagnose
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           5

bonding"

New serine protease(s) and kinase involved in regulating cell activity and viability - particularly the testis-specific protease HELA2 used for modulation of fertility and as tumour suppressor Example 15; Fig 20B; 167pp; English.

AAW77302-04 represent HELA2 homologues. The genes are found in a cluster on chromosome lop13.3 HELA2 was isolated from HeLa cells, and has homology to serine proteases. The protein is involved in or associated with regulation of cell activity and/or vlability. Administration of recombinant HELA2 (also called testisin) is used to increase fertility. Commence of the MELA2 reduces fertility. HELA2 is also a suppressor of testicular germ cell cancers (seminoma) and is also expressed in some non-testicular cancers (of colon, pancreas, prostate and ovary), so is a marker/potential therapeutic target for cancer. The promoter from the HELA2 gene is useful for testis-specific expression of other genes, e.g. for gene therapy or modulation of fertility. Drugs that block activity of HELA2 should have antitumour activity (other than in testis) while in testis recombinant HELA2 should stop growth of tumours and normalise sperm development (eliminating the need for orchidectomy). Identification of mutant forms of HELA2 can be used to diagnose infertility.

Clones are derived from the mouse BAC library RPCI-23. For BAC
library availability, please contact Pieter de Jong
(pieter@dejong.med.buffalo.edu). Clones may be purchased from
BACPAC Resources (http://pacpac.med.buffalo.edu/orderingframe.htm)
or from Resea ch Genetics (info@resgen.com). BAC end page:
http://www.tigr.org/tdb/bac_ends/mouse/bac_end_intro.html
Plate: 282 row: C column: 1
Seq primer: T7 selected DNA was cloned into the pBACe3.6 vector at the EcoRI sites. The ligation products were transformed into DH10B electrocompetent cells (BRL Life Technologies). " 137 c 157 g 163 t /note="Organ: Kidney/Brain; Vector: pBACe3.6; Site_1: EcoR1; Site_2: EcoR1; Female C57BL/6J mouse kidney and/or brain genomic DNA was isolated and partially digested with a combination of EcoR1 and EcoR1 Methylase. /note="Vector: pT7T3D-Pac (Pharmacia) with a modified

polylinker; Site_1: Not I; Site_2: Eco RI; 1st strand cDNA

was prepared from mRNA obstanced from Clontech Laboratories

'Inc., and primed with a Not I - oligo(dT) primer [5',

Dobble-Stranded cDNA was ligated to Eco RI adaptors

(Pharmacia), digested with Not I and cloned into the Not I

and Eco RI sites of the modified pT7T3 vector. Library

went through one round of normalization to Cot5, and was

constructed by Bento Soares and M. Fatima Bonaldo. "

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Encyclopedia project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Syloration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in Riken Genomic Science Science Laboratory in Riken.

Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand cDNA was primed with a primer 15' GGGAGAGGAAGGACAGCATTTTTTTTTTTTTTTTVN 3', contributed to prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. cDNA went through one round of normalization to Rot = 10.0 and subtraction to adapter of sequence [5'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Carninci,P., Shibata,Y., Hayatsu,N., Sugahara,Y., Shibata,K., Itoh,M., Konno,H., Okazaki,Y., Muramatsu,M. and Hayashizaki,Y. Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes Genome Res. 10 (10), 1617-1630 (2000)

                    Genomic Sciences Center and Genome Science Laboratory in RIKBN Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand cDNA was primed with a primer ps. GAGAGAGAGAGACAGAGCTTTTTTTTTTTTTTTTVN 3'], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. cDNA went through one round of normalization to Rot = 5.0 and subtraction to of sequence [5'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /db.xref="taxon:10090"
